

Document an existing experience

Narrow your focus to a specific scenario or process within an existing product or service. In the **Steps** row, document the step-by-step process someone typically experiences, then add detail to each of the other rows.

SCENARIO

Browsing, booking, attending, and rating a local city tour

SCENARIO: Early detection of Chronic Kidney Disease using Machine Learning	<div></div> <div>Entice</div> <div>How does someone initially become aware of this process?</div>	<div></div> <div>Enter</div> <div>What do people experience as they begin the process?</div>	<div></div> <div>Engage</div> <div>In the core moments in the process, what happens?</div>	<div></div> <div>Exit</div> <div>What do people typically experience as the process finishes?</div>	<div></div> <div>Extend</div> <div>What happens after the experience is over?</div>
<div></div> <div>Steps</div> <div>What does the person (or group) typically experience?</div>	<div><div>By creating awareness among people about kidney diseases and its seriousness</div><div>Letting them know the benefits of early detection and prevention</div><div>Informing them about existing methods to detect CKD</div><div>Infusing them with the advantages of Machine Learning model</div></div>	<div><div>Initially, the symptoms are not shown</div><div>The test reports may contain any variations from normal value</div><div>At later stages the patient may experience severe pain</div></div>	<div><div>Test reports are checked for any variations</div><div>Appropriate values that model seeks is provided for detection</div></div>	<div><div>After the required inputs are provided to the model, it starts detecting</div><div>It provides the output as how much the kidney is affected and in which stage the patient is now</div></div>	<div><div>Once the detection is done, the necessary treatment is given</div><div>Once the treatment is given patients are relieved from the tension and pain</div></div>
<div></div> <div>Interactions</div> <div>What interactions do they have at each step along the way?</div> <div><div>■ People: Who do they see or talk to?</div><div>■ Places: Where are they?</div><div>■ Things: What digital touchpoints or physical objects would they use?</div></div>	<div><div>Patients may use on their own to check on how their disease is cured based on treatment</div><div>It helps them to improve their treatment based on patient's condition</div><div>Doctors use the model to check on which stage is the patient now</div><div>By deploying the model through appropriate tech stack the results are provided to the users</div><div>Users will feed the input to the model through user friendly UI</div></div>	<div><div>After deploying it can be used from anywhere</div><div>In testing labs or by the patient at their locations</div></div>	<div><div>By deploying it as a simple web applications it can be used in any devices</div><div>Such as through laptops, phones, Tablets, PCs etc</div></div>	<div><div>By making the model available as a website it is more useful</div><div>It is easy to monitor the condition of the disease in every stage</div></div>	
<div></div> <div>Goals & motivations</div> <div>At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")</div>	<div><div>To detect CKD at early stages</div><div>To get cured from CKD</div></div>	<div><div>To reduce cost</div><div>To save time</div></div>	<div><div>To provide painless detection technique</div><div>To eliminate human errors</div></div>	<div><div>To prevent severe damage of kidney</div><div>To monitor the condition of the patient regularly</div></div>	<div><div>To provide relief from painless procedure</div><div>To help patient lead a healthy life</div></div>
<div></div> <div>Positive moments</div> <div>What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?</div>	<div><div>Early detection helps patients to relieve from the disease at the early stage</div></div>	<div><div>It helps prevent patients' kidney from severe damage</div></div>	<div><div>Proper treatment helps patients for faster recovery</div></div>	<div><div>The patient may feel confident as the model's result will be error free</div></div>	<div><div>Make patients free from pain and tension and helps them lead a healthy life</div></div>
<div></div> <div>Negative moments</div> <div>What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?</div>	<div><div>One may think what if model's prediction goes wrong?</div></div>	<div><div>Later detection may lead to severe pain and even death</div></div>	<div><div>Doctors should understand the results and patient's condition and should provide proper treatment</div></div>	<div><div>For some medications provided patient's body may show some side effects</div></div>	<div><div>One may think why should I waste my money in this model?</div></div>
<div></div> <div>Areas of opportunity</div> <div>How might we make each step better? What ideas do we have? What have others suggested?</div>	<div><div>It can be used in hospitals to detect CKD</div></div>	<div><div>It can also be used by the patients to detect CKD by providing appropriate input from their test reports</div></div>	<div><div>Patients can also use this model to know the condition of their kidney during treatment</div></div>	<div><div>It can also be used as web application through online</div></div>	<div><div>After deployment, it can also be used as Application</div></div>
